

## Materials and Care

The plywood surface is covered with a durable film of melamine, made on the basis of natural resin. It provides water resistance to the surface and protects the plywood panel from mechanical damage.

The edges are treated with natural beeswax, so over time, with frequent cleaning, its coverage may decrease. It can be restored with any plant oil.

The wooden rods are varnished with a certified water-based varnish.

The laminated surfaces of the plywood can be easily cleaned with a tissue moistened with water. You can use any furniture cleaner if needed. If the child is particularly allergic, you can use natural lemon juice for cleaning.

## Mattress

The mattresses are covered with extra high-quality, durable, soft polyester. Fabric is functional, with easy clean, pet-friendly and soft touch properties. Fabrics were made out of recycled polyester. The mattress cover is easily removable. However, it is recommended to clean the furniture fabric with soapy water rather than washing it in the washing machine.

## Recommendations

It is recommended to place the transformable climbing frame on a level surface at least 2 m from any structure or obstruction such as a fence, buildings, trees, scaffolding, water tanks, deep pits, laundry lines, or electrical wires.

The Climber Set shall not be installed over concrete, asphalt, or any other hard surface.

The Climber Set should not be left in moisture as the natural wood may swell. Only to be used indoors or for a short period outdoors during dry weather conditions.

Before each use, it is recommended to check whether the screws are tightened sufficiently. Always check the wooden bars for breaks or cracks.

Modifications made by the consumer to the original activity toy (for example, the addition of an accessory) must be carried out according to the manufacturer's instructions.
